Experience

Playlist **Senior Software Engineer, Payments**, *Jul 2024 – Present.*

- Developed and maintained .NET Core microservices for financial tasks and integrations with Stripe.
- Led Kubernetes capacity planning during high season for the payments team.
- Developed and maintained a React-based financial admin platform used by 1,000+ payment specialists.
- Led Payments PCI initiative, ensuring code integrity.
- Coached and mentored engineers, enhancing team capabilities.
- Participated in the on-call rotation.

Telnyx **Software Engineer II, Finance Systems**, *Jun 2023 – Jul 2024.*

- Built RabbitMQ producers and consumers in Python microservices within AWS Kubernetes.
- Maintained FastAPI and legacy Python services processing $10M/monthly transactions.
- Participated in the on-call rotation.

Microsoft **Software Engineer II, Outlook Platform**, *Apr 2021 – Jun 2023.*

- Developed and maintained .NET backend services supporting Outlook (REST and gRPC).
- Built an asynchronous .NET assistant running daily for all Outlook mailboxes.
- Created and maintained diagnostics tools in .NET and PowerShell for production issues.
- Migrated the most-used Outlook service from .NET Framework to .NET Core.
- Participated in the on-call rotation.

Software Engineer, Commercial Software Engineering, *Jan 2019 – Apr 2021.*

- Contributed to *aks-engine*, an open-source Go project for Azure Kubernetes Service deployments.
- Developed a mandatory TypeScript library supporting organization-wide linting.
- Designed and implemented a Go-based notification system for a large LATAM e-commerce.
- Led deployment of a COVID-19 data API for a major health organization.

Software Engineering Intern, Commercial Software Engineering, *Feb 2018 – Jan 2019.*

- Created a TypeScript (Angular) web client for a machine learning platform used by 300 data scientists.
- Developed REST APIs in Python, ASP.NET Core, and Java Spring.
- Built a TypeScript (Angular) web client for a trading platform used by thousands of traders.
- Designed distributed cloud applications using Azure, Terraform, Docker, and Kubernetes.

CETAX **AI Intern**, *Feb 2017 – Feb 2018.*

- Built Big Data, Machine Learning, and Artificial Intelligence applications using Python.
- Introduced and promoted a code review culture.

IBM **Cloud Computing Researcher**, *Sep 2015 – Feb 2017.*

- Deployed and maintained Minicloud, a free OpenStack cloud for Unicamp students.
- Developed PowerGraph, a Python server monitoring tool.
- Interviewed and mentored new project members.
- Developed OpenCL2CUDA, a Python converter from the OpenCL HPC library to CUDA.

Education

Universidade Estadual de Campinas, *Computer Engineering*, 2014 – 2018.

- Won 3rd place at Microsoft's Hack the Campus Hackathon with a university data chatbot.
- Assisted and taught shell scripting and Linux courses at the Free Software Group.
- Served as VP of the Computer Science and Engineering Student Union (1,000+ students).
- Teaching assistant for the Digital Circuits course, assisting students and administering practical exams.
- Final thesis: Cloud platform for high processing computing workloads. Platform still in use at Unicamp.

Languages

Portuguese: Native **English**: Fluent **Spanish**: Intermediate **French**: Basic

Technical Skills

Intermediate C/C++, Java, TypeScript, Docker, React

Advanced Python, C#, Go, Shell Script, Git, GNU/Linux, AWS, Azure, Kubernetes, Terraform
